### DETAILED ACTION

1. This action is in response to Amendments filed on 03/12/2009.

**Claims 1-2, 4-8 and 10-13** have been amended.

**Claims 14-15** are new.

**Claims 1-15** are presented for examination and are pending.

### *Information Disclosure Statement*

2. The information disclosure statement (IDS) submitted on 01/07/2009 is being considered by the examiner. Signed and dated copy is attached to this Office Action.

### REASONS FOR ALLOWANCE

3. The following is an examiner's statement of reasons for allowance:

Examiner has carefully considered Amendment dated 03/12/2009, updated search and reviewed all pending **Claims 1-15**.

The current application is directed towards presence management technology for presence that is the dynamic attribute of users of information processing devices in a system composed of a plurality of information processing devices connected to a network.

**Independent Claims 1 and 8** disclose information delivery system and apparatus which provides a system for managing user's presence information which may be often updated to the latest presence information, and a matching condition for another user's

Art Unit: 2444

presence information, and for deciding a mutual matching between the presence of users with the respective conditions designated by the users. The presence server has a matching decision program for determining first and second users whose presences are matched with the respective designated conditions bi-directionally to execute the matching decision process when an arbitrary user's presence was updated. A matching decision is made as a bi-directional matching decision both to determine if the updated presence of the first user matches a matching condition designated by the second user, and also if the presence of the second user matches a matching condition designated by the first user.

One of the prior art of records, Gershman discloses that a mobile portal as a presence management apparatus updates a presence (location information) of the user/shopper received from the electronic valet used by the user/shopper. The mobile portal updates the presence (online catalogue) of the store/retailer received from the second apparatus used by the store/retailer. The mobile portal receives a condition (shopping list, shopping venue they intended to visit) from the electronic valet. The mobile portal makes matching when the location of the user/shopper is changed or the condition of the user/shopper is changed. The mobile portal transmits information to the user/shopper or store/retailer which satisfies the matching.

However, Gershman's system does not disclose unit corresponding to "matching condition registration means for registering a matching condition for the first user's (user/shopper) presence designated by the second user (store/retailer)" of the present invention. Gershman's system shows a fixed condition that only indicates a user whose

Art Unit: 2444

location is close to a store. Gershman does not disclose the matching decision means of bidirectional matching decision between the first and second users. Gershman does not teach that when the presence of the second user was updated or the condition of the second user was updated, the bidirectional matching mutually between the first user (shopper) and the second user (store).

One of another prior art of records, the secondary reference, Heinnonen discloses that a presence management device includes means for updating user's presence and means for searching a device having the same presence. Heinnonen does not disclose matching condition registration means for registering at said user table a matching condition for another user's presence including the second user's presence received from the first apparatus and designated by the first user, and a matching condition for another user's presence including the first user's presence received from the second apparatus and designated by the second user. Heinnonen does not disclose matching decision means of bidirectional matching decision between the first and second users.

Upon an updated search of the prior art, no significant sources were located that teach or suggest, "matching condition registration means for registering at said user table a matching condition for another user's presence including the second user's presence received from the first apparatus and designated by the first user, and a matching condition for another user's presence including the first user's presence received from the second apparatus and designated by the second user."

Thus the prior art of record neither render nor anticipate the claimed invention.

Therefore, all pending claims are allowed.

### ***Conclusion***

4. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
